Problem

Late detection is costly; follow-up is still fragmented.

Oral diseases affect nearly **3.7B** people worldwide.

Untreated dental caries in permanent teeth is the **most common health condition globally.**

Untreated caries affects an estimated **2.5B** people.

Clinics still handle OPG review, patient recall, and booking through **disconnected manual steps.**

The bottleneck is not only diagnosis — it is **operational follow-through.**

LATER
DETECTION
HIGHER COSTS
MORE
COMPLICATIONS

Solution

Teta2 turns one OPG into a structured patient-recall workflow.

1 AI-assisted OPG review

2 Clinician decision at tooth level

Tooth 26
Possible caries

- ☐ Monitor
- ☒ Recall patient
- ☐ Refer
- ☐ No action

3 Multilingual follow-up outreach

Hi, we found a small issue on your X-ray. We recommend a check-up.

Automatically synced with doctor working hours

Doctor stays in control.

Each follow-up plan is tooth-specific.

Patients receive multilingual messages.

Booked appointments flow back into the clinic dashboard.

MVP

Live product workflow
inside the clinic dashboard.

Pitch Deck

AI review is clinician-supervised.

Follow-up is structured, not ad hoc.

Booking closes the loop.

The screenshot displays the Teta2 MVP interface, which is a dental clinic dashboard. The left sidebar contains navigation options: Dashboard, Patients & records, OPG + AI (highlighted), Follow-up plans, AI conversations, Appointments, Working hours, and Settings. The main content area shows the 'OPG + AI' section for patient 'Arevik Namira - 1002'. It features an 'Interactive OPG' overlay on a dental radiograph, with a legend indicating that green represents treated or restored teeth and red represents pathological findings. The overlay includes a table of clinical findings with tooth numbers, percentages, and status (AI, Pending, Confirmed, Rejected). The interface also includes a subscription status (30 days left), a search bar, and a user profile (ME, mehrshadmoradiy, DIRECTOR). Callouts highlight key features: 'Interactive OPG overlay', 'Per-tooth review and prioritization', 'Follow-up plan generation', and 'Appointments + working hours integration'.

Teta2

Competitive advantage

Teta2 is more than image analysis.

— Pitch Deck

Workflow, not just detection

Connects OPG review to action.

Tooth-level follow-up

Each problematic tooth can drive its own plan.

Multilingual outreach

Messages adapt to patient language context.

Booking built in

Unique scheduling link tied to doctor availability.

Clinician in control

AI supports decisions, it does not replace the doctor.

The product advantage is operational orchestration around clinical findings.

Business model

Recurring clinic subscription with focused launch pricing.

— Pitch Deck

Armenia

CLINIC SUBSCRIPTION

The ask

A focused SAFE round to harden the product and win early clinics.

Pitch Deck

\$10,000 SAFE

Use of funds

Product hardening and QA

Cloud, deployment, and messaging costs

Clinic onboarding and outreach

Localization and follow-up quality improvements

Key milestones

Onboard early pilot clinics

Validate follow-up-to-appointment conversion

Improve multilingual patient communication

Prepare for broader launch execution

Goal: convert the MVP into a repeatable clinic workflow.

Sources & data notes

External statistics are limited to cited sources; Teta2 product, pricing, team roles and visuals are company-provided.

WHO Oral health fact sheet (17 Mar 2025)

Nearly 3.7B people affected by oral diseases; untreated caries in permanent teeth is the most common health condition.

WHO Oral health Q&A (16 Jul 2024)

2.5B people with untreated dental caries; 1B people with severe gum disease.

CDC 2024 Oral Health Surveillance Report

One in five U.S. adults aged 20-64 had at least one untreated cavity; included only as public-health context.

CompanyData - Dental Practices Worldwide (31 Aug 2026)

1,882,823 registered dental practices worldwide; commercial registry dataset, not a clinical licensing authority.

SmartScrapers / Rentech Digital (1 Apr 2026)

257 dental clinics in Armenia; 16,160 dental clinics in Russia; commercial POI dataset, not official licensing data.
